21st Century Cures Act Overview

**Electronic Visit Verification System Required for
Personal Care Services and Home Health Care Services Under Medicaid**

- States that do not comply by the mandated dates will face an escalating penalty:
 - Personal Care Services: January 1, 2019
 - Home Health Services: January 1, 2023
- The EVV system must verify the following:
 - Location and Type of service;
 - Individuals Providing and Receiving service;
 - Date and Time the service Begins and Ends.
- States must:
 - Implement a process to seek input from beneficiaries and caregivers
 - Consult with Agencies and ensure the program:
 - Is minimally burdensome, HIPAA compliant, takes into account existing EVV systems
- CMS will publish best practices by Jan 1, 2018:
 - Training caregivers on the use of the system and the prevention of fraud
 - Educating family caregivers and members on the use of EVV to prevent fraud

EVV qualifies for Enhanced Federal Match

90% Implementation Fees
75% Operational Fees

CBO Scored EVV Mandate Positively

4

Electronic Visit Verification (EVV): What is it?

Electronic Visit Verification is a modular technology solution that provides transparency into home based care delivery, supporting provider network optimization while improving the member's quality of care. Modules typically include:

- Scheduling Module**
 - Scheduler contains data on provider, caregiver, member and authorizations;
 - Adherence to authorization is done at the point of scheduling, not after the service is delivered;
 - Missed or late scheduled visits create alerts to inform the provider that the member was not served according to the care plan.
- Visit Verification Module**
 - When the caregiver arrives on site, they "check-in" using a variety of technologies (mobile, telephonic, device, etc.);
 - When they leave, they "check-out" via the same means;
 - The system accurately captures visit start, stop, duration, and tasks performed

5

EVV Data Capture Technology Review

- Multiple verification modalities generally required
- Configurable Alerts
- Voice Biometrics
- Task Entry
- Mobile expands the capabilities of EVV beyond Time-in and Time-out

Mobile Visit Verification

- Triangulates location using GPS
- Available for tablets or phones
- Multiple Deployment Models, i.e. BYOD, Member Centric, Provider Supplied

Telephonic Visit Verification

- Uses ANI to match caller's phone number to provider account and caregiver location
- Declining prevalence of land-lines

Fixed Visit Verification Device

- Electronic random number match device
- Allows disconnected check in/out process
- Alternative Fixed Verification solutions, i.e. Bar Codes

Mobile Technology Evolving as the "Go To" Technology

6

Evolving Technology Trends for EVV

Voice Recognition – The next disruptive technology?

Sandata 7

Evolving Technology Trends for EVV

Identity Verification: Emerging Solutions to Deter Identify Theft

Facial Recognition

- Registration with Driver's License and photo
- Login to EVV solution with a "selfie"
- Real-time facial recognition verifies identity

Sandata 8

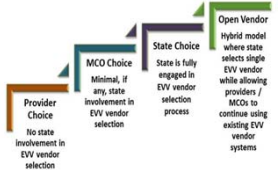

EVV Program Models

State-level Electronic Visit Verification ("EVV") programs are a relatively new concept, and today there are 19 States who have programs deployed or in implementation. As these early adopters have explored EVV, four major models have evolved in the market:

State Medicaid Directors Need to Choose an EVV Model

1. **Provider Choice Model**
(Used by three States);
2. **MCO Choice Model**
(Used by three States);
3. **State Choice Model**
(Used by eleven States);
4. **Open Vendor Model**
(Used by two States).

EVV Program Models

Sandata 9

Provider Choice

States that have implemented this model include:

- Missouri
- New York
- Washington

Sandata 10

Provider Choice

In this model, the state generally requires the provider community to self-fund, select and implement an EVV solution of their choosing. Some states have offered a preferred vendor list for providers to select from, while other states have simply established a minimum set of standards for vendor selection.

State	Providers	Quality Monitoring	Outcomes
<ul style="list-style-type: none"> • The "Unfunded Mandate" • Enforcement has generally been "Pay and Chase" • Easiest model to implement 	<ul style="list-style-type: none"> • All costs are the responsibility of the providers • Small agencies & individual Providers ill-equipped • Generally low level of monitoring and compliance 	<ul style="list-style-type: none"> • Limited access to data • Disparity in EVV products - challenging to consolidate data • Retrospective audits are typically deployed 	<ul style="list-style-type: none"> • There are no published studies showing savings attributed to the use of this model

This Model Can Be Improved With Aggregator Technology

Sandata 11

MCO Choice

States that have implemented this model include:

- Iowa
- New Mexico
- Tennessee

Sandata 12

MCO Choice

The state requires the MCOs to fund, select and implement an EVV solution of their own choosing. States may or may not set minimum standards for vendor selection and require a minimum set of reporting on EVV activity.

State	<ul style="list-style-type: none"> • Low cost model to implement • Data disparity can be a challenge with multiple EVV solutions • MCOs may or may not enforce compliance
Providers	<ul style="list-style-type: none"> • Multiple MCOs with multiple EVV solutions – Disaster?
Quality Monitoring	<ul style="list-style-type: none"> • Data disparity creates challenges for reporting & monitoring • Disparity in features/functionality from MCO to MCO • MCOs generally have Analytics capabilities
Outcomes	<ul style="list-style-type: none"> • There are no published studies showing savings attributed to the use of this model

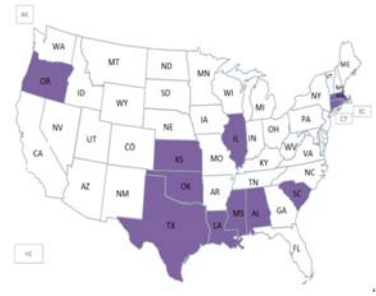

This Model Can Be Improved With Aggregator Technology

 13

State Choice

States that have selected this model include:

- Alabama
- Connecticut
- Illinois
- Kansas
- Louisiana
- Massachusetts
- Mississippi
- Oklahoma
- Oregon
- Rhode Island
- South Carolina
- Texas

 14

State Choice

The state Medicaid program contracts with a single EVV vendors and mandates that all Providers use that vendor's EVV system The selected solution is implemented by the state, with states having direct management and oversight over the entire program.

State	<ul style="list-style-type: none"> • Qualifies for 90% Implementation match by CMS • Qualifies for 75% Operational match by CMS • Requires active involvement and management by the state
Providers	<ul style="list-style-type: none"> • Providers are provided EVV solution at "no cost" • Positive for small agencies or Individual Providers • Challenging for larger, technically sophisticated providers
Quality Monitoring	<ul style="list-style-type: none"> • Highest level of demonstrated compliance • Consistency of real-time data enables transparency • Alerting and monitoring of gaps in care
Outcomes	<ul style="list-style-type: none"> • Documented savings from 5-50% and Quality metrics have been produced from this model.

Mature Model That Has Delivered Documented Outcomes

 15

Open Vendor

A new model currently employed by Ohio.

Florida recently procured an Open solution for the FFS members covered by AHCA.

Many new procurements are selecting this model.

Sandata

16

Open EVV Choice

The Open Vendor Model is a new hybrid model where the state selects an EVV vendor, and allows Providers to use the state-selected solution at no-cost, or to continue using their current EVV solution. A vendor agnostic Aggregator solution receives data from all EVV systems and provides comprehensive oversight over the entire program – regardless of EVV system used.

State	<ul style="list-style-type: none"> Least disruptive environment, most complexity for state Qualifies for CMS Enhanced match: 90% and 75% Heavy involvement in procurement and system management
Providers	<ul style="list-style-type: none"> Maximum flexibility: use free system or system of their choice Best suited for small and large providers Will require integration with state Aggregator solution
Quality Monitoring	<ul style="list-style-type: none"> Expect high level of compliance Real-time visit data available to the Payers and Providers Alerts can be configured for quality assurance
Outcomes	<ul style="list-style-type: none"> There are no published studies showing savings attributed to the use of this model, but expect similar savings as the State Choice model (5-50%)

Sandata *Most States Are Considering This Model*

Scorecard: Evaluating Each Model

Each State must carefully evaluate its unique environment in order to select the EVV model that is right for their program while complying with the new mandate. **Factors:**

- Concerns regarding fraud, waste and abuse within the provider network
- Impact of new technology to the provider network
- Overall service quality for recipients
- Impact of Managed Care companies to deliver services

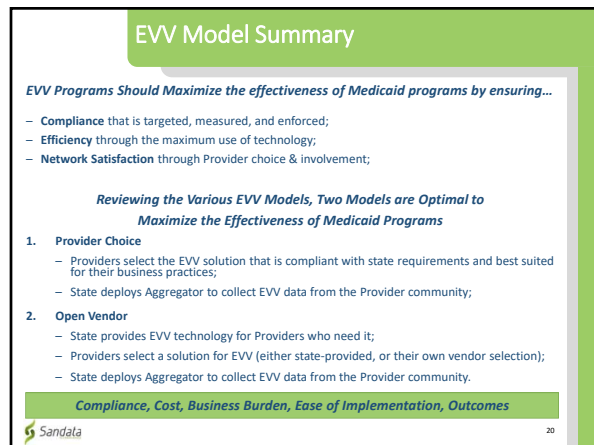

Sandata has scored each of the **Four Models** based on how favorable they are to each of the three constituents - **State, MCO, and Provider** - using the following measures:

COMPLIANCE	COST	BUSINESS BURDEN	EASE OF IMPLEMENTATION	OUTCOMES
Measured in terms of adoption of the mandated EVV technology	Cost to implement (assumes enhanced federal match of 90%)	Effort to implement and manage the program	Complexity to implement on a statewide basis	Savings the program is expected to generate

Potential Value of EVV Solutions

Three Ways to Drive Incremental Value

1. Operational efficiencies
2. Differentiation in your market
3. Participation in new reimbursement models

Sandata 22

Drive Value – Operational Efficiencies

1. **Maximize Revenue**
 - Fill missed visits based on real-time alerts
 - Staff hard-to-fill cases with broadcast messaging
 - Prevent short visits with prompting
 - Avoid underutilization of Authorizations
 - Become a preferred provider in the network
2. **Reduce Costs**
 - Reduce caregiver support costs: directions, schedules, payroll
 - Reduce scheduling costs
 - Reduce paper costs: timesheets, drive time, storage
 - Lower staffing costs: satisfaction, turnover
 - Lower audit risks and costs

Sandata 23

Drive Value – Differentiation

Capture Health Status Changes

- Managed Care will soon focus on this information
- Build processes to react to changes (and report it to case managers)
- Request Authorization changes based on data
- Share real-time data with family

Report Operational Metrics

- Late or missed visits
- On-time data
- Customer satisfaction
- Caregiver turnover
- Authorization to First visit

Sandata 24

Drive Value – New Reimbursement Models

1. FFS is declining, Value-Based Payment models increasing

- Definition is evolving, but
- To participate in new models
 - Measure it
 - Share it
 - React to it

Source: Kaiser Family Foundation, The State of Medicaid 2017, April 2017

2. Managed Care on the rise

- Block Grants or Per Capita Caps?
- 40 states currently, going to...
- Medicaid expansion is over (?), Provider risk-share is coming soon?
- Member Management**, as a solution, will be a mid-term requirement

EVV Will Enable Providers to Operate in the Evolving Market
